

THE UNDERWATCH LIFEGUARD

THE LIFEGUARD THAT NEVER LOOKS AWAY!

SCARY FACTS

Drowning can happen in as little as 20 seconds.

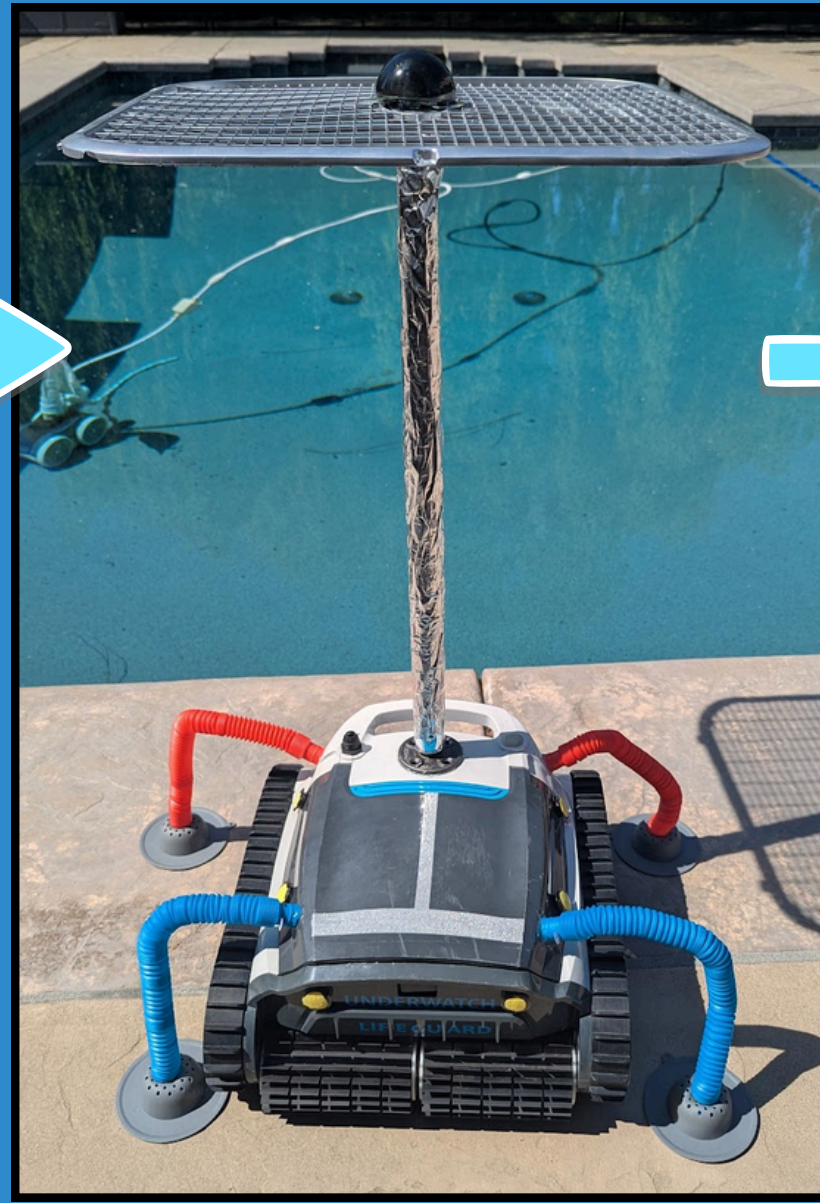

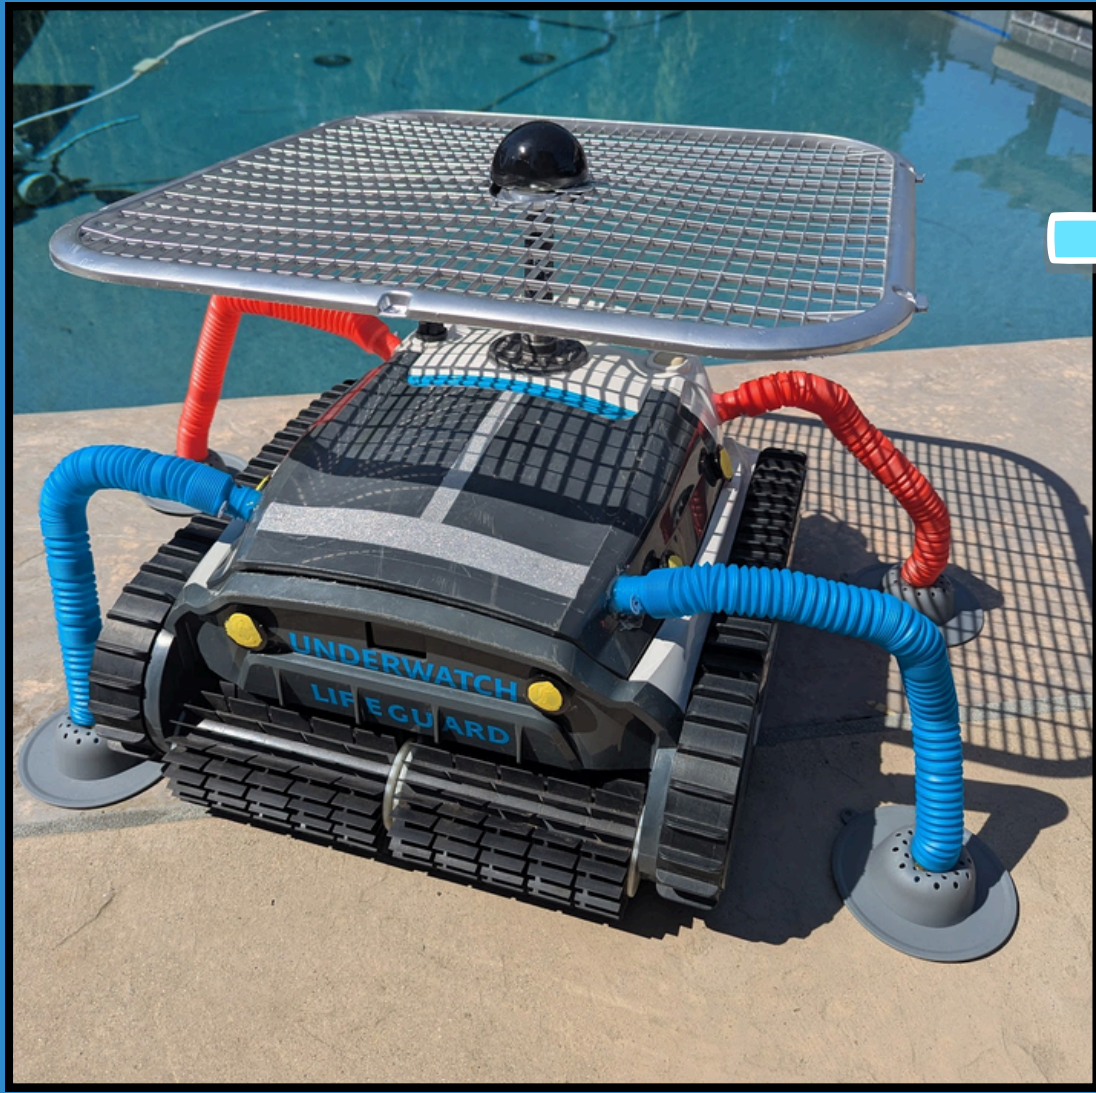

300,000 people die from drowning worldwide.

Drowning is the #1 reason kids ages 1-4 die, and the #2 reason for ages 5-14.

4,500 people drown in the U.S. each year.

How It Works!

1.

Sits on the bottom of pool on a low voltage charging pad, so it always has power.

2.

Using its dome camera, LED lights & AI, it figures out when someone is drowning, based on their movements.

3.

When it sees someone drowning, it sounds an alarm, texts pool owners, and alerts home devices, like Alexa.

4.

It then uses AI to move directly under the person and plants its 4 suction arms to create extra stability.

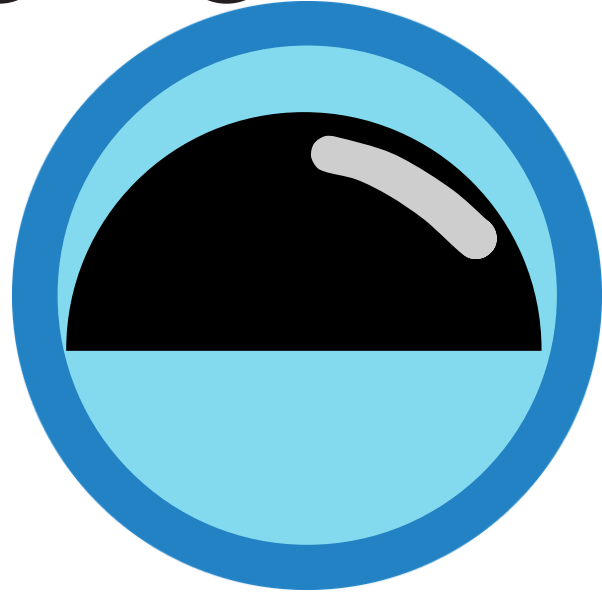

5.

It uses a hydraulic telescoping lift to raise a stainless steel platform that pushes the swimmer above water.

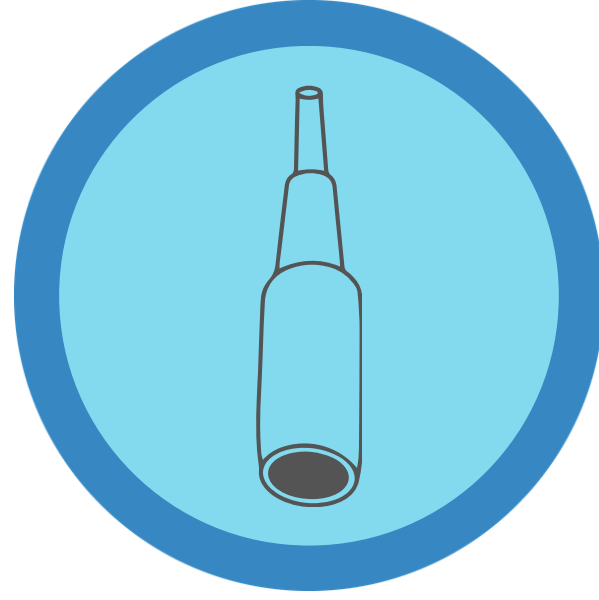

6.

Moves the platform pool-side, so the person can get off or get help from a grownup. Rescue takes < 20 seconds!
