<th>AMERICAN ROBIN</th>
<th>MOUSE</th>
<th>GARTER SNAKE</th>
</tr>
</thead>
<tbody>
<tr>
<td>FACTS: Their eggs are a light blue color. Robins can have three different broods per year.</td>
<td>FACTS: Mice eat between 15-20 times a day! On average, mice live about 5 months in the wild due to predators.</td>
<td>FACTS: Garter snakes will hibernate throughout winter by finding cracks in the ground. Usually grow about 23-30 inches long but have been known to grow up to 53 inches.</td>
</tr>
<tr>
<td>FOOD SOURCE: Eats insects, worms, berries, and fruit</td>
<td>FOOD SOURCE: Eats fruits, seeds, and grains but also will eat pretty much anything they can find.</td>
<td>FOOD SOURCE: Known to eat worms, frogs, and sometimes mice.</td>
</tr>
<tr>
<td>CONSUMED BY: Eaten by foxes, bobcats, hawks, and owls.</td>
<td>CONSUMED BY: Eaten by owls, hawks, snakes, house cats, and foxes.</td>
<td>CONSUMED BY: Eaten by bears, raccoons, skunks, hawks, and owls.</td>

### Butterfly

**Facts:**
- Butterflies come in many different shapes and colors, but they all have six legs and four wings.
- Butterflies have a tiny layer of scales on their wings which help them absorb heat and fly.

**Food Source:**
- Eat nectar from flowering plants.

**Consumed By:**
- Eaten by wasps, birds, snakes, toads, dragonflies, and spiders.

### Oak

**Facts:**
- Plant use sunlight to make energy and convert air (carbon dioxide) and water into "food" for the plant.

**Food Source:**
- Air (Carbon Dioxide) and water

**Consumed By:**
- Leaves- Caterpillars
- Acorns- deer, squirrels, mice, birds, sometimes rabbits

### Worm

**Facts:**
- In one acre of land, there can be more than a million earthworms.

**Food Source:**
- Eats both dead and alive plants and animals. Also eats animal poop and other microscopic organisms.

**Consumed By:**
- Eaten by lizards, toads, birds, raccoons, skunks, mice, and foxes.

### Fungi

**Facts:**
- The honey mushroom (a type of fungus) is the largest living organism on the planet.
- Fungi can remain dormant for years or even decades until they have the right conditions to grow.

**Food Source:**
- Fungi feed on dead or decaying material which helps remove debris from the ground and adds nutrients to soil for other organisms.

**Consumed By:**
- Eaten by insects, birds, plants, bacteria, deer, rabbits, and squirrels.

### Soil/Compost

**Facts:**
- There are more microorganisms in a handful of soil than there are people on Earth.
- Soil/Compost is made of 50% air and water and 50% broken rock and decaying plants and animals.

**Food Source:**
- Soil/Compost does not consume energy.

**Consumed By:**
- Soil/Compost contains nutrients and water necessary for plants to successfully grown.

### Honey Bees

**Facts:**
- Honey bees have hairy bodies which collect pollen from the flowers that they land on.
- They live in large colonies and each bee has a different job.

**Food Source:**
- Bees eat nectar and pollen.

**Consumed By:**
- Honey bees are eaten by birds, raccoons, opossums, skunks, bears, and insects.
### BLACKBERRY

**FACTS:**
- There are around 375 species of blackberries.
- Blackberries have been used as a remedy for Gout and other various illnesses.

**FOOD SOURCE:**
- Blackberries need to be planted in full sun with plenty of room to grow.

**CONSUMED BY:**
- Eaten by humans, birds, skunks, foxes, and raccoons.

### STRAWBERRY

**FACTS:**
- There are 200 seeds on an average strawberry.
- There is a museum in Belgium dedicated to strawberries.

**FOOD SOURCE:**
- Strawberries need to be planted in full sun with plenty of room to grow.

**CONSUMED BY:**
- Eaten by humans, birds, deer, raccoons, squirrels, rabbits, and mice.

### FOX

**FACTS:**
- Even though foxes are related to dogs, they act a lot like cats. They can climb trees, are more active at night and have spines on their tongues.

**FOOD SOURCE:**
- Foxes will eat small mammals, birds, reptiles, frogs, insects, worms, fruits, berries, vegetables, seeds and fungi.

**CONSUMED BY:**
- Eaten by wolves, bears, hawks, and owls.

### CRABGRASS

**FACTS:**
- A single crabgrass plant can produce 150,000 seeds.
- Crabgrass is one of the most troublesome weeds.

**FOOD SOURCE:**
- Crabgrass needs the soil to be 60 degrees or warmer for a week before it'll begin to grow.

**CONSUMED BY:**
- Large mammals may eat this, but prefer other foods.

### HOUSE CAT

**FACTS:**
- A cats brain is more complex than a dogs.
- Cats have defined routes and territories in their environment.

**FOOD SOURCE:**
- Usually eat food provided by humans but will eat birds, insects, mice, and rabbits.

**CONSUMED BY:**
- Eaten by owls and hawks.

### SNAIL

**FACTS:**
- Some aquatic snails have lungs.
- Snails like to eat together.

**FOOD SOURCE:**
- Snails eat plants, fruits, vegetables, fungi, dead plants and animals, and sometimes dirt.

**CONSUMED BY:**
- Eaten by mice, squirrels, toads, birds, birds, garter snakes, and humans.
