### Let's Argue! Hearing Hot Topics

Does political affiliation affect how we interact with and view others? Our study is designed to address that question, as well as several other variables. Relationships; internal factors such as gender, age, and race; and information or context are all considerations for this data collection.

Participate

What Who Why

This study looks into how our political affiliations and our perceptions of others based on their political affiliations affects our willingness to listen and engage in discussion.

Time to complete

15 minutes

Frequency

Once

This study explores how participants' political beliefs predict willingness to discuss certain topics. Participants are presented with different scenarios ("your neighbor donates to charity") and are then asked whether or not they would engage in conversation in this scenario. They are also asked questions about their demographics and political affiliation.
