Freezing Ice

Mia and Devon are planning a party. They need to make two sizes of ice—a large block of ice and a bag of small ice cubes. They wondered if the size affects the temperature at which the water freezes. This is what they think:

Mia: A large block of ice needs to freeze at a lower temperature than small ice cubes.

Devon: A large block of ice freezes at the same temperature as the small ice cubes.

Whom do you agree with? _____ Explain your thinking.
