

Biological Evolution

Four friends were discussing the meaning of the term *biological evolution*. This is what they said:

Mario: “I think it is another term for natural selection.”

Sally: “I think it mainly explains how life started.”

Cameron: “I think it mainly explains how life changed after it started.”

Paz: “I think it includes both how life started and how it changed after it started.”

Who do you most agree with? Explain what you think biological evolution is.
