

# Moonlight

Five friends noticed they could see better at night when there was a full Moon. They wondered where the moonlight came from. This is what they said:

**Curtis:** “The Moon reflects the light from the Earth.”

**Chet:** “The light from the Sun bounces off the Moon.”

**Clarence:** “The Moon gets its light from distant stars.”

**Fallon:** “The Moon absorbs light from the Sun during the day.”

**Deirdre:** “There is light inside of the Moon that makes it shine.”

Which person do you most agree with? Explain your thinking about moonlight.
